4)Add 2 private subnets in private route table.

—> create a pri-route named route table and
In private route don't add gateways that the main part internet access
is not used in private

Create route table [Info](#)

A route table specifies how packets are forwarded between the subnets within your VPC, the internet, and your VPN connection.

Route table settings

Name - optional
Create a tag with a key of 'Name' and a value that you specify.

VPC
The VPC to use for this route table.

vpc-09cc1e7ee377b05d1 (new-vpc) ▼

Tags

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

Key **Value - optional**

You can add 49 more tags.

Keeps it default don't add any thing in route

zendengine

NAT gateway settings

Name - optional
Create a tag with a key of 'Name' and a value that you specify.

my-nat

The name can be up to 256 characters long.

Availability mode [Info](#)
Choose whether to deploy across all zones in the region or restrict to a single availability zone.

☐ **Regional - new**
Scales automatically across all regional AZs, simplifying management for multi AZ deployments.

☒ **Zonal**
Provides granular control within a specific availability zone, adhering to subnet level settings.

Subnet
Select a subnet in which to create the NAT gateway.

subnet-026832339ca13bf47 (pub-sub1)

Connectivity type
Select a connectivity type for the NAT gateway.

☒ **Public**
☐ Private

Elastic IP allocation ID [Info](#)
Assign an Elastic IP address to the NAT gateway.

eipalloc-0d8f7af3ed8ca48ec

Allocate Elastic IP

► **Additional settings** [Info](#)

Tags

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

Key	Value - optional

NAT gateway nat-0bd28d452a7ca67d3 | my-nat was created successfully.

S3

—> now create a flow log for s3

The type of traffic to capture (accepted traffic only, rejected traffic only, or all traffic).

☐ Accept

☐ Reject

☒ All

Maximum aggregation interval [Info](#)

The maximum interval of time during which a flow of packets is captured and aggregated into a flow log record.

☒ 10 minutes

☐ 1 minute

Destination

The destination to which to publish the flow log data.

☐ Send to CloudWatch Logs

☒ Send to an Amazon S3 bucket

☐ Send to Amazon Data Firehose in the same account

☐ Send to Amazon Data Firehose in a different account

S3 bucket ARN

The ARN of the Amazon S3 bucket to which the flow log is published. You can specify a specific folder in the bucket using the `arn:aws:s3:::[bucket-name]/[folder_name]/` format.

[Create S3 bucket](#)

Must be in the format: `arn:aws:s3:::[bucket-name]`

[Please note, a resource-based policy will be created for you and attached to the target bucket.](#)

Log record format

Specify the fields to include in the flow log record.

☒ AWS default format

☐ Custom format

Additional metadata

Include additional metadata to AWS default log record format.

☐ Include Amazon ECS metadata

Format preview

`${version} ${account-id} ${interface-id} ${srcaddr} ${dstaddr} ${srcport} ${dstport} ${protocol} ${packets} ${bytes} ${start} ${end} ${action} ${log-status}`

[Copy](#)

Destination to s3

Give the bucket name

And create the flow log of s3

—> s3 flow log is created

Object management overview

The following bucket properties and object management configurations impact the behavior of this object.

Bucket properties

Management configurations

Bucket Versioning
 When enabled, multiple variants of an object can be stored in the bucket to easily recover from unintended user actions or synchronization failures.

Replication status
 When a replication rule is applied to an object the replication status indicates the progress of the operation.
